POSITION OF RESEARCH ASSOCIATE/RESEARCH FELLOW

Project Information

The Research Associate / Fellow will join a national longitudinal research project. The project focuses on analysing the factors that promote resilience in individuals who are placed in out-of-home care.

Job Description and Responsibilities

The Research Associate/ Fellow will perform a crucial role in managing the data-related tasks in the study.

The Research Associate / Fellow will:

- Conduct data analysis and communicate findings to stakeholders
- Prepare research reports and publications
- Extract relevant information from case files
- Participate in research related activities (seminars, workshops, etc.)

Requirements

- A Master’s degree in relevant areas, degree by research or at least two years’ of relevant working experience
- Proficient in data-related tasks
- Excellent in quantitative research methods and proficient in the use of SPSS or other software such as R, Mplus, Stata.
- Excellent work planning and time management skills
- Able to multi-task and work under pressure in a changing environment
- Good communication skills (e.g. inter-personal skills, ability to present findings to different stakeholders)
- Self-motivated: Able to work well both independently and as a member of a team
- Evidence of publications record in peer-review journals
